

Maximum Goal Differential = 6

Games decided in OT are now treated as 0.5 goal W/L as opposed

to the full 1 goal win/loss. To that end, the OTW and OTL columns are subsets of the totals in the W and L columns. OTW and OTL are used to calculate the adjustment (OTAdj) needed for games decided in OT.

RANK	TEAM	W	L	T	OTW	OTL	GmPerf	Sched	OTAdj	Total	Last 5
1,	Liberty University,_____	8	0	0	0	0	5.3,	6.5,	0.00	11.77,	11.72

- * in place of rank indicates team whose rank is based on fewer than 3 scores.

The program starts all teams with an equal arbitrary value and then adjusts them all recursively based on game scores until the lowest cumulative error between expected goal differentials and actual goal differentials is reached (convergence). One effect often noticed is that a team's rating can change slightly without playing due to previous opponents playing which affects their rating and their opponent's rating, etc. The Total column is in goal units and the difference in this value between any two teams is the predicted goal differential for a game played at a neutral site between those two teams.

It should be noted that these rankings are an average performance value for each team for the entire season, all games are equally weighted, so a team's latest game may make up only 1/40th of a team's rating at the end of the season.

Games that go to shootouts for decision are considered ties for ratings purposes.
